

The folder enhancement package is designed to reinforce the score and continue the scoring process through the critical angle of the fold. In addition, it reduces jams by diverting scrap from product and surrounding areas. The package contains jointed folder rods, continuous scoring folder, and folder scrap blower.

- The jointed folder rods are designed to reinforce the score and continue the scoring process through the critical angle of the fold. The rods are made of stainless steel and are jointed at the ends to allow them to be easily installed and removed. The rods are also designed to be adjustable, allowing them to be set to the desired angle of the fold.
- The continuous scoring folder is designed to continue the scoring process through the critical angle of the fold. The folder is made of stainless steel and is designed to be adjustable, allowing it to be set to the desired angle of the fold. The folder is also designed to be easily installed and removed.
